

telespree

Telespree has pioneered a self-service platform that automates service enrollment and programming, account management, and advertising on wireless devices for mobile carriers resulting in significant cost savings, improved end-user experience and increased distribution flexibility. We are looking for a creative self-starter to join our operations team. You will be working on new technology for provisioning, activating, and servicing millions of mobile devices.

Position: **Systems Engineer**

Job Responsibilities:

- Primary responsibilities include release management
 - Build and deploy applications for QA and production
 - Document deployment procedures for production releases
 - Report bugs discovered during build and deployment
- Administer internal development and QA systems
- Install and maintain new applications to support engineering team
- Configure and maintain internal monitoring systems
- Provide feedback to engineers regarding design of application in relation to production deployment
- Management and monitoring of production systems
- Assist in debugging and troubleshooting J2EE applications
- Design, implement, and troubleshoot network environments
- Manage and improve internal backup infrastructure
- Administer production SS7 platforms on Solaris 10

Experience/Skills Desired:

- At least 3 years experience in Linux administration (Red Hat/CentOS preferred)
- At least 3 years experience in PERL and/or BASH scripting (Ruby a plus)
- At least 1 year experience administration of J2EE application servers (WebLogic preferred)
- Experience building applications with Ant and/or Maven
- Experience using and administering a version control system (Perforce a plus)
- Strong understanding of server architectures and server performance bottlenecks
- Strong understanding of networking concepts
- Experience with Oracle or other RDBMS
- Experience using and deploying performance monitoring and management tools such as Nagios, Cacti, etc.
- Experience writing and/or debugging Java code
- BA/BS in CS or related field, or equivalent experience
- Proven record of being proactive in seeking and implementing new technologies and software that improve current platforms
